

Giant Axonal Neuropathy

From a missing protein to the first gene therapy delivered into the spinal fluid.

GENE: **GAN** CHROMOSOME 16Q23.2 AUTOSOMAL RECESSIVE ONSET ≈ 3 YEARS < 1 IN 1,000,000

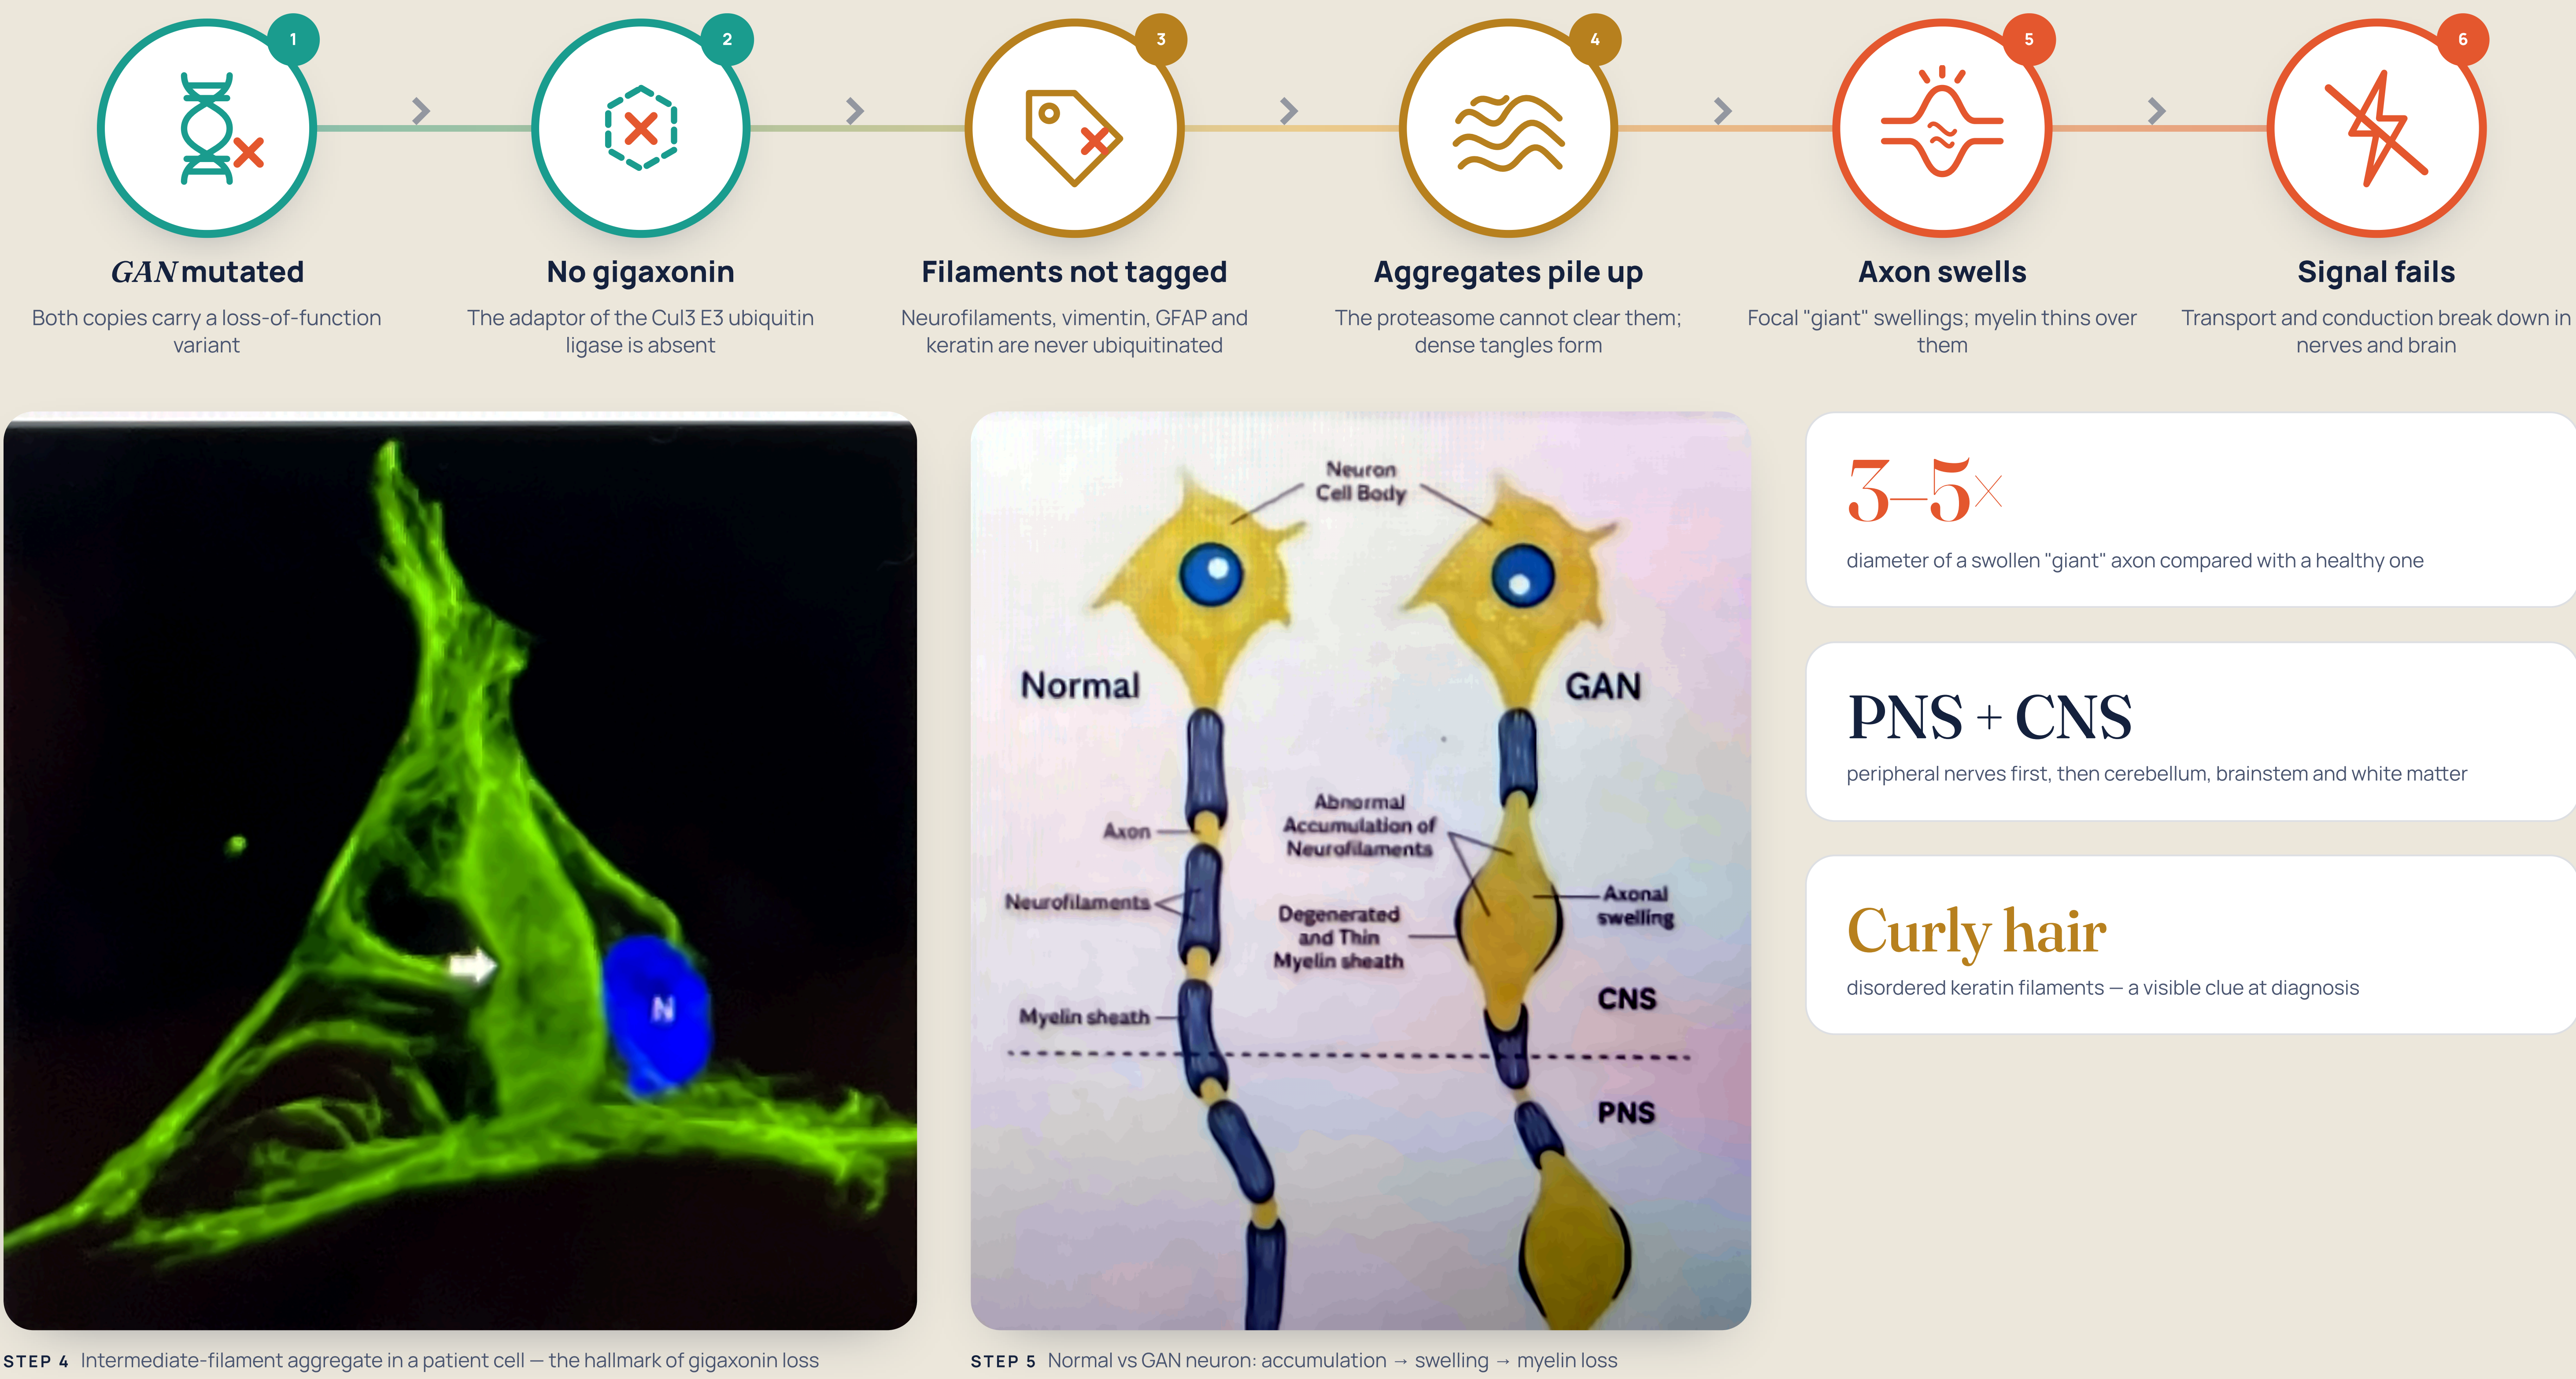

— THE GENETIC ROOT CAUSE

1 One gene, two broken copies

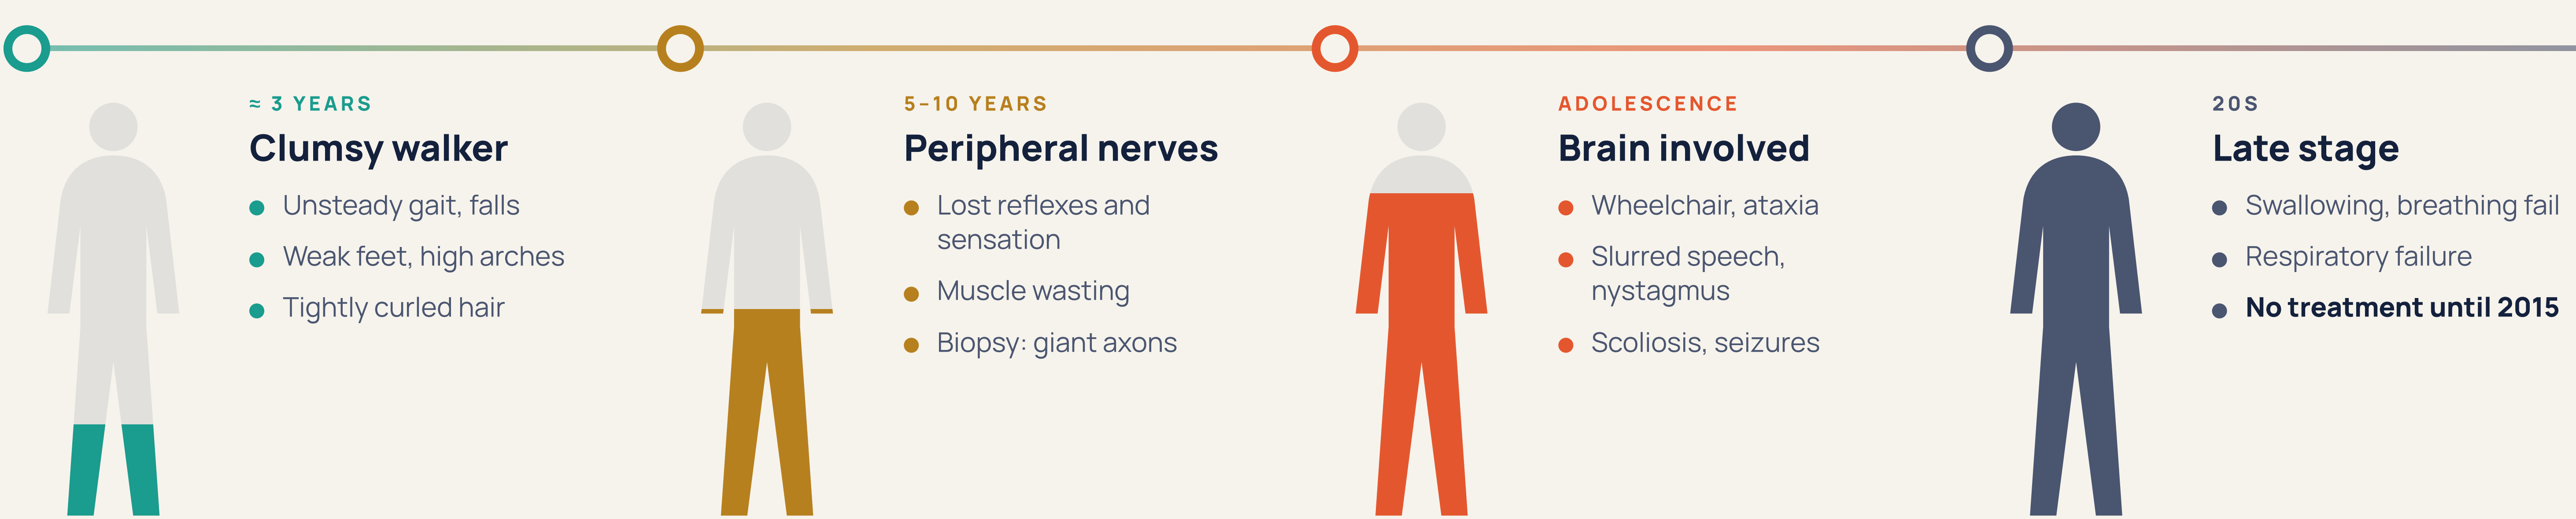

— THE GIGAXONIN PATHWAY – HOW ONE MISSING PROTEIN DAMAGES THE NERVE

2 The cell's filament recycler goes missing

— SYMPTOMS AND CLINICAL COURSE

3 A slow loss — from the feet upward

HANNAH SAMES
Rexford, New York

— THE CASE THAT CHANGED THE FIELD

"We decided to *fight*."

2008

Diagnosed at 4

Two deletions — Hannah makes no gigaxonin at all

2008

Hannah's Hope Fund

Founded by her parents; first GAN symposium the same year

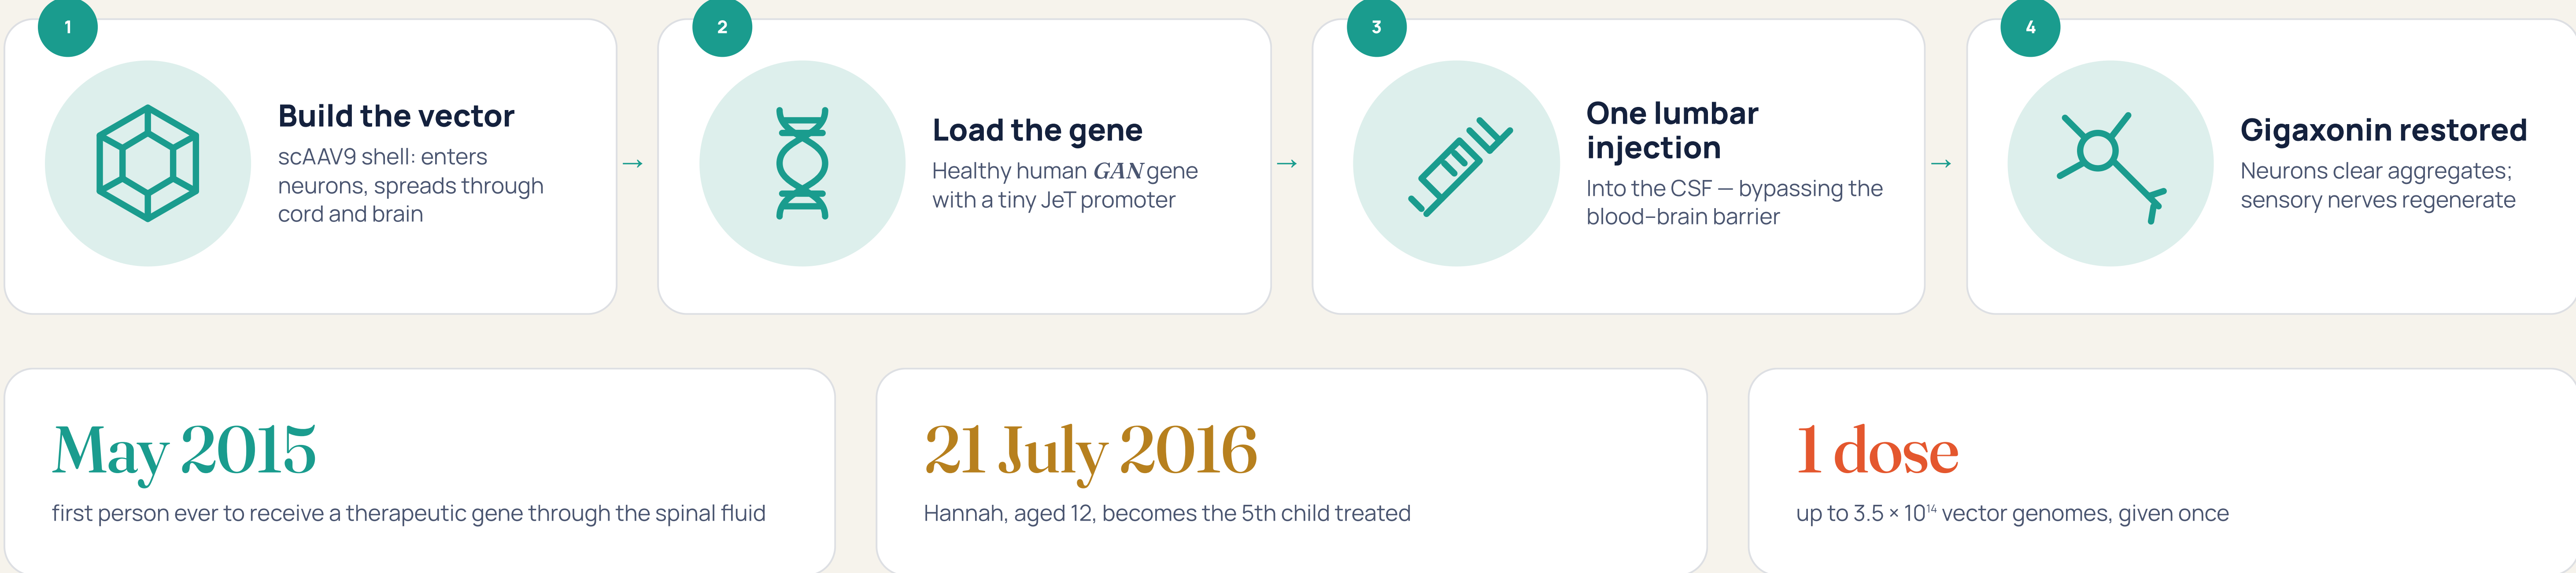

\$8 M+

Raised for a cure

Funds Steven Gray (UNC) to build the gene-therapy vector

— THE GENETIC TREATMENT · SCAAV9/JET-GAN · NIH CLINICAL CENTER · NCT02362438

5 A working gene, delivered into the spinal fluid

— WHAT THE TRIAL SHOWED — NEJM, MARCH 2024

6 Bending the curve of an "untreatable" disease
